Laboratory Exercise 2 (Week 2)

1 Task One: Delta Rule for Artificial Neural Networks Training

The delta rule is expressed as the following equation

$$w_i \leftarrow w_i - \eta \frac{dE}{dw} \quad (1)$$

In which

$$p = \sum_{i=1}^n x_i w_i - \theta \quad (2)$$

$$\hat{y} = f(p) \quad (3)$$

$$f(p) = \frac{1}{1 + e^{-p}} \quad (4)$$

$$E = \frac{1}{2}(y - \hat{y})^2 \quad (5)$$

So we can get the following quation by the chain rule

$$\frac{dE}{dw_i} = \frac{dE}{d\hat{y}} \frac{d\hat{y}}{dp} \frac{dp}{dw_i} \quad (6)$$

Where

$$\frac{dE}{d\hat{y}} = (\hat{y} - y) \quad (7)$$

Figure 1: Perceptron with activation function

Algorithm 1 Delta Rule for learning single ANN

Input: training dataset $D = \{(\mathbf{x}_k, \mathbf{y}_k)\}_{k=1}^m$;

learning rate η

randomly initialize w_i and θ

Process:

1. **repeat**
2. for all $(\mathbf{x}_k, \mathbf{y}_k)$ do
3. compute \hat{y} through the forward process
4. update w_i through $w_i \leftarrow w_i - \eta(\hat{y} - y)\hat{y}(1 - \hat{y})x_i$
5. update θ through $\theta \leftarrow \theta + \eta(\hat{y} - y)\hat{y}(1 - \hat{y})$
6. end for
7. **until** $|E_{t+1} - E_t| \leq \varepsilon$ **or** $t < T$

Output:

$$\begin{aligned}\frac{d\hat{y}}{dp} &= f(p)(1 - f(p)) \\ &= \hat{y}(1 - \hat{y})\end{aligned}\tag{8}$$

$$\begin{aligned}\frac{d\hat{y}}{dp} &= f(p)(1 - f(p)) \\ &= \hat{y}(1 - \hat{y})\end{aligned}\tag{9}$$

So put (7)~(9) into (6), we have

$$\begin{aligned}\frac{dE}{dw_i} &= \frac{dE}{d\hat{y}} \frac{d\hat{y}}{dp} \frac{dp}{dw_i} \\ &= (\hat{y} - y)\hat{y}(1 - \hat{y})x_i\end{aligned}\tag{10}$$

So for w_i updating we have

$$w_i \leftarrow w_i - \eta(\hat{y} - y)\hat{y}(1 - \hat{y})x_i\tag{11}$$

In the same way, we can learn θ

$$\begin{aligned}\frac{dE}{d\theta} &= \frac{dE}{d\hat{y}} \frac{d\hat{y}}{dp} \frac{dp}{d\theta} \\ &= (\hat{y} - y)\hat{y}(1 - \hat{y})(-1)\end{aligned}\tag{12}$$

$$\theta \leftarrow \theta + \eta(\hat{y} - y)\hat{y}(1 - \hat{y})\tag{13}$$

Using C++ and delta rule to train the following ANNs by online learning
With the following input and output

$$\begin{array}{cccc} x_1 & 0 & 0 & 1 & 1 \\ x_2 & = & 0 & 1 & 0 & 1 \\ x_3 & & 1 & 1 & 1 & 1 \end{array}\tag{14}$$

$$y = 0 \quad 0 \quad 1 \quad 1\tag{15}$$
